## TVB eMail systems – what works

### POP3 incoming service:

Host / mail server	mail.tovevalley.uk
PORT	110
Security policy	Use SSL/TLS if available

### IMAP receiving service:

Host / mail server	mail.tovevalley.uk
PORT	143
Security policy	Force use of SSL/TLS

### SMTP sending service:

Host / mail server	mail.tovevalley.uk
PORT	2500
Security policy	Force use of SSL/TLS

The reason for using PORT 2500 for SMTP is to bypass hotel and other similar organisations' blocking of port 25 – often used by spammers.

If you have problems with "Force use of SSL/TLS you could try, temporarily, setting no security.
